NEGLECTED DISEASE R&D SCOPE DOCUMENT

This document sets out the neglected disease research and development (R&D) activities that are included within the scope of the G-FINDER survey, as well as the R&D activities that are excluded or partially excluded (restricted).

The G-FINDER scope has been defined by an expert international Advisory Committee, in line with the following three criteria:

1. The disease disproportionately affects people in low- and middle-income countries (LMICs)*
2. There is a need for new products (i.e. there is no existing product, or improved or additional products are needed)
3. There is market failure (i.e. there is insufficient commercial market to attract R&D by private industry)

A list of the neglected diseases, products and technologies included in the G-FINDER survey scope is presented in the neglected disease R&D matrix.

* For the purpose of the G-FINDER survey, the World Bank’s definitions of low- and middle-income countries are used

I. BASIC RESEARCH

Studies that increase scientific knowledge and understanding about the disease, disease processes, pathogen or vector, but which are not yet directed towards a specific product. Please see section X for disease-specific restrictions to research activities in this category.

1. NATURAL HISTORY AND EPIDEMIOLOGY

1.1 Basic mechanisms of disease transmission
1.2 Disease prevalence in relation to human genotype, strain variation, and inoculation rates
1.3 Genetic diversity and phylogeny
1.4 Epidemiological research on the roles of human behaviour and effects of specific host genotypes on disease transmission
1.5 Epidemiological research on host genetic factors influencing the prevalence of disease (e.g., sickle cell, HLA type, Rh factor) or the impact of disease in select host genotypes
1.6 Epidemiological research on the distribution of pathogen, vectors and the prevalence of morbidity and mortality due to the disease that is NOT related to the development of a specific product
1.7 Epidemiological research on antigenic variability; population studies of human immunity to the disease
1.8 Epidemiology of drug resistance or evolutionary studies on resistance development for established, existing drugs
1.9 Epidemiological research related to vector behaviour and ecology, and vector control

2. IMMUNOLOGY OF DISEASE

2.1 Defining signalling pathways of immune function (mechanisms of systemic and/or mucosal immunity)
2.2 Interaction and impact of the signalling pathways with the pathogen
2.3 Development of assays or tools potentially useful for drug, vaccine, microbicide, or biologic research & development
2.4 Identification of immune correlates of protection, including in vivo and in vitro studies on the protective immune response (cellular, humoral, and/or mucosal)
2.5 Investigating the immune response to particular antigens; studies of specific antigens or immunogens proposed as vaccine or biologic candidates
2.6 Development of animal models to determine immune correlates of protection
2.7 Genetics of the immune response to the disease and effects of antigen polymorphism or genetic diversity on specific vaccine or biologic candidates (as recognised from field studies)

3. BIOLOGY OF DISEASE

3.1 Structure and morphology of different developmental stages
3.2 Host-parasite interactions and the biology of pathogen interaction with the vector host
3.3 Biology of invasion of host cells (entry mechanisms)
3.4 Localisation of pathogen proteins or antigens
3.5 Development of culture and purification tools to assist in study of the pathogen
3.6 Descriptions of pathogenic species and characterisation of strains or subtypes in animal models (course of infection, susceptibility of different hosts)
3.7 In vitro studies of interactions between the pathogen and other infectious agents (e.g. Epstein-Barr virus)

4. BIOCHEMISTRY OF THE PATHOGEN

4.1 Metabolism and nutrition
4.2 Protein sequencing, enzymology, and protein and enzyme characterisation (including antigen analysis)
4.3 Signal transduction; translation, processing and export of proteins
4.4 Glycosylation, Glycosyolphosphatidylinositol (GPI) anchors, transporters, ion channels, mitochondrial metabolism, and electrophysiology studies
4.5 Influence of the pathogen on host-cell biochemistry
4.6 Characterisation of antigen/protein diversity of pathogenic strains and subtypes
4.7 Characterisation of proteins and molecular basis for host-cell invasion
4.8 Analysis & characterisation of drug-resistant strains and studies probing drug resistance mechanism/s or pathways
4.9 Non-specific research on the pathogen or host targets to identify potential drug, vaccine, biologic, or diagnostic targets (i.e. target identification)

5. GENETICS OF THE PATHOGEN

5.1 Studies on chromosomes; genomic maps; genetic crosses
5.2 Cloning and sequencing of genes; cDNAs for functional proteins (including drug targets and vaccine candidates)
5.3 Expression of proteins from cloned genes; RNA analyses
5.4 Control and timing of gene expression; post-transcriptional processing
5.5 Analysis and characterisation of genes involved in drug resistance
5.6 Genetics of antigenic variability
5.7 Techniques for the genetic transformation of the pathogen
5.8 Tests for genotyping the pathogen for laboratory use

6. BIOINFORMATICS AND PROTEOMICS

6.1 Microarray analysis
6.2 Genome annotation - gene predictions
6.3 Comparative genomics, sequence alignment, genome assembly
6.4 Variation, single nucleotide polymorphisms (SNPs)
6.5 Database applications, data mining tools
6.6 Structural and functional genomics
6.7 Structural and functional proteomics
6.8 Proteome analysis, protein structure alignment
7. PATHOPHYSIOLOGY AND DISEASE SYMPTOMS

7.1 Clinical diagnosis and clinical observations of the disease presentation and pathophysiology in humans and in animals
7.2 The role of nutritional status in determining disease severity and treatment effectiveness
7.3 Histopathology of the disease in humans and in animals
7.4 The mechanisms of pathology of the disease including the role of the host immune system, and expression of adhesion molecules
7.5 Development of improved animal models to study disease pathophysiology, to evaluate the biological properties of drugs and microbicides
7.6 Identification of biomarkers for diagnostics or therapeutic monitoring
7.7 Studies of the mechanisms by which particular susceptible/resistant mammalian host genotypes exert their effect
7.8 Research on the effects of host co-morbidities and secondary effects of pathogen invasion (e.g., research on anaemia/neurological effects of malaria)
7.9 Interactions between the disease and other relevant concurrent infections, including determining timing and establishment of infection

8. VECTOR BIOLOGY, BIOCHEMISTRY, AND GENETICS

8.1 Characterisation of vector behaviour and ecology
8.2 Studies of vector susceptibility to infection; studies of parasites and pathogens of vectors (including potential biological control agents)
8.3 Identification of genes responsible for disruption of parasite/virus growth, genetic transformation of vectors, and insect transposable elements
8.4 Target identification of vector sites that may become the subject of in vitro screening or molecular design
8.5 Development of tests for vector identification, taxonomy and systematics, and for the identification of infected vectors
8.6 Studies evaluating resistance development, including the genetics and transmission of pesticide resistance

9. DISCOVERY AND PRECLINICAL

Research activities targeted at discovering and optimising investigational small molecule compounds including the processes needed to allow new chemical entities to proceed to human trials; including:

9.1 Target validation, characterisation, and selection
9.2 High throughput screening, lead optimisation
9.3 Development of analytical tests for assaying drugs, including the development of animal models
9.4 Research on drugs from natural products; identification and characterisation of active ingredient
9.5 Research on the effects of drug treatment on immune status
9.6 Measurement of the activity of potential drugs in vitro and in animal models; including safety and efficacy studies necessary to satisfy Investigational New Drug (IND) requirements
9.7 Studies evaluating the activity of new drugs on drug-resistant strains, their effect on genes involved in drug resistance, or their effect on resistance pathways
9.8 Development of tests for drug susceptibility of the pathogen for research purposes
9.9 Drug pharmacokinetic, toxicity and metabolism studies in vitro and in animal models, including bioavailability, adsorption, metabolism, and excretion (ADME) studies
9.10 Chemistry and synthesis of drugs, including process and scale-up manufacture, production of Good Laboratory Practice (GLP) and Good Manufacturing Practice (GMP) batch for toxicology studies; and other Chemistry and Manufacture Control (CMC) activities required to allow new chemical entities to proceed to human trials
9.11 Preparation of Investigational New Drug (IND) application for regulatory submission
9.12 Optimisation and manufacturing of new formulations to support label-expansion* for new patient sub-populations (e.g. infants, pregnant women)

Back to top

10. CLINICAL DEVELOPMENT - PHASE I
First-in-human clinical trials to determine safety and tolerability of investigational new drugs in a small group of patients or healthy volunteers, including:
   10.1 Phase Ia single ascending dose studies to determine pharmacokinetics, pharmacodynamics, and maximum tolerated dose
   10.2 Phase Ib multiple ascending dose studies to determine the pharmacokinetics, pharmacodynamics, safety and tolerability of multiple doses
   10.3 Trials of food effect or drug-drug interactions

Back to top

11. CLINICAL DEVELOPMENT - PHASE II
Clinical trials to determine the efficacy, safety and therapeutic dose of investigational new drugs in a small set of human subjects (up to several hundred), including:
   11.1 Phase IIa proof of concept studies to demonstrate clinical efficacy or biological activity
   11.2 Phase IIb dose-finding studies to determine dose with optimum biological activity with minimal adverse effects

Back to top

12. CLINICAL DEVELOPMENT - PHASE III

* Label-expansions refer to changes to drugs or their labels after they have been approved. This includes changes in manufacturing, recommended patient population and/or formulation. To change a label, market a new dosage or strength of a drug, or change the way a drug is manufactured, the company must submit a supplemental new drug application (sNDA) to regulatory authorities to obtain marketing approval
Clinical trials to support the registration of investigational new drugs or label-expansion of already registered drugs in a trial population large enough to provide statistical significance (from several hundred to several thousand)

12.1 Regulatory standard clinical trials to assess effectiveness of a new drug against current ‘gold standard’

12.2 Regulatory standard clinical trials that support a formal registration for label-expansion* of an existing drug to a new disease or patient group (e.g. paediatric patients, pregnant women or HIV-positive patients)

12.3 Regulatory standard clinical trials that support formal registration for label-expansion* of an existing drug to a new use, such as intermittent preventative therapy and pre-exposure prophylaxis

13. CLINICAL DEVELOPMENT - BASELINE EPIDEMIOLOGY

Studies evaluating potential trial site populations to confirm disease incidence, prevalence or exposure risk, and which serve as the foundation for determining the optimal collection, analysis, interpretation and presentation of clinical trial data; including:

13.1 Epidemiological studies directly linked to the conduct or support of clinical trials of products in development, in order to assess or validate the epidemiology of disease, disease incidence, or health of target populations at trial sites

13.2 Preliminary studies of morbidity and mortality at potential clinical trial sites, where these studies are directly linked to planned product trials

13.3 Pre-trial activities designed to understand trial site conditions before the commencement of trials and to facilitate engagement

14. CLINICAL DEVELOPMENT - UNSPECIFIED

Other costs required to support clinical testing of investigational new drugs as needed for regulatory approval; including:

14.1 Infrastructure and site development costs directly associated with the conduct of clinical trials for drug development in LMICs (e.g. refurbishment of hospital wing, vehicle purchase, generators, training and community relationship building)

14.2 Further pharmaceutical development to generate the final clinical formulation, dosage form and other Chemistry and Manufacture Control (CMC) activities required for regulatory submission

14.3 Compiling of all non-clinical and clinical data for submission of a New Drug Application (NDA) to regulatory authorities

14.4 Behavioural research prior to registration relating to risk assessment, factors affecting adherence to protocol, and product acceptability

14.5 Protocol development, investigator meetings, Good Clinical Practice (GCP)-monitoring, quality control, data management, analysis and reporting, establishing a Data Safety Monitoring Board (DSMB), and trial audits

15. POST-REGISTRATION STUDIES

Studies relating to the detection, monitoring, evaluation, and prevention of adverse events associated with newly approved drugs so as to bridge the gap between highly controlled clinical trials intended for regulatory approval and the largely uncontrolled use of new drugs by patients. Also includes studies conducted after regulatory approval that assess drug effectiveness in the wider population or which are necessary to support product use in LMICs.
15.1 Pharmacovigilance and post-registration studies of newly registered drugs to assess adverse events, toxicology and safety
15.2 Effectiveness studies and head-to-head comparator studies of newly registered drugs (versus other therapies or interventions)
15.3 Cost-effectiveness studies of newly registered drugs
15.4 Treatment interactions and population level studies (of newly registered products e.g., pharmaco-epidemiological and resistance studies)
15.5 Behavioural research post-registration of new drugs relating to risk assessment, factors affecting adherence to protocol, provider compliance, and product acceptability
15.6 Case history reports and assessment of long-term prophylaxis using newly registered drugs in communities in LMICs

Back to top

III. VACCINES

Research activities and processes necessary to develop and improve investigational vaccines specifically intended to prevent infection; including vaccine design, preclinical and clinical development and other activities essential for successful vaccine development and uptake. Please see section X for disease-specific restrictions to research activities in this category.

16. DISCOVERY AND PRECLINICAL

Research activities targeted at discovering and optimising investigational vaccines and including the processes necessary to allow a candidate vaccine to proceed to human trials; including:

16.1 Studies supporting novel vaccine design, including target validation & candidate optimisation
16.2 Development of animal models to assist in vaccine design and testing
16.3 Evaluation of vaccine technologies (e.g. adjuvants, delivery systems) to improve the immunogenicity of an identified candidate
16.4 Preclinical safety and immunogenicity studies with candidate vaccines, including use or development of functional assays
16.5 Preclinical animal studies, challenge models and addressing the correlation between in vitro models, animal models and field results
16.6 Studies on the genetics of the immune response to selected antigens as vaccine candidates, optimisation of animal models and correlates to clinical results
16.7 Manufacturing scale-up and consistency of manufacture, including production of Good Laboratory Practice (GLP) and Good Manufacturing Practice (GMP) batches for regulatory toxicology studies and other Chemistry and Manufacture Control (CMC) activities required to allow a candidate vaccine to proceed to human trials
16.8 Research on safety and regulatory considerations (e.g. validation of preclinical assays to permit registration)
16.9 Preparation of an Investigational New Drug (IND) application for regulatory submission
16.10 Optimisation of vaccine candidates for global use (cheaper, more stable, ease of administration, addition of LMIC-specific strains)

Back to top

17. CLINICAL DEVELOPMENT - PHASE I
First-in-human clinical trials to determine the safety of investigational new vaccines for the first time in human subjects (up to one hundred) including:

17.1 Phase Ia studies assessing safety, dosing, and immunogenicity in human volunteers
17.2 Phase Ib studies assessing safety, dosing, and immunogenicity in clinically exposed or high-risk populations

18. CLINICAL DEVELOPMENT - PHASE II

Clinical trials to continue to determine the efficacy and safety of investigational new vaccines in a small set of human subjects (typically several hundred), including:

18.1 Phase IIa challenge studies
18.2 Phase IIb safety and preliminary efficacy studies in exposed populations or those at high-risk of infection

19. CLINICAL DEVELOPMENT - PHASE III

Clinical trials to demonstrate the safety and efficacy in a larger human subject population (from several hundred to several thousand) and support the registration of investigational new vaccines, including:

19.1 Phase III expanded efficacy, effectiveness and safety studies required for registration purposes, including implementation, retention and follow-up of volunteers

20. CLINICAL DEVELOPMENT - BASELINE EPIDEMIOLOGY

Studies evaluating potential trial site populations to confirm disease incidence, prevalence or exposure risk, and which serve as the foundation for determining the optimal collection, analysis, interpretation and presentation of clinical trial data; including:

20.1 Epidemiological studies directly linked to the conduct or support of clinical trials of preventive vaccines in development, in order to assess or validate the epidemiology of disease, disease incidence, or health of target populations at trial sites
20.2 Preliminary studies of morbidity and mortality at potential clinical trial sites, where these studies are directly linked to planned preventive vaccines trials
20.3 Pre-trial activities designed to understand trial site conditions before the commencement of trials and to facilitate engagement

21. CLINICAL DEVELOPMENT - UNSPECIFIED

Other costs required to support clinical testing of investigational new vaccines as needed for regulatory approval; including:

21.1 Infrastructure and site development costs associated with the conduct of clinical trials for vaccine development in LMICs (e.g. refurbishment of hospital wing, vehicle purchase, generators, training and community relationship building)
21.2 Further biological/product development to generate the optimal clinical formulation and dosage form, and other Chemistry and Manufacture Control (CMC) activities required for regulatory submission
21.3 Compiling all non-clinical and clinical data to obtain a Biologics License from regulatory authorities
21.4 Behavioural research prior to registration relating to risk assessment, factors affecting adherence to protocol, and product acceptability

21.5 Protocol development, investigator meetings, Good Clinical Practice (GCP) monitoring, quality control, data management, analysis and reporting, establishing a Data Safety Monitoring Board (DSMB) and trial audits

Back to top

22. POST-REGISTRATION STUDIES

Studies relating to the detection, monitoring, evaluation, and prevention of adverse events associated with newly approved vaccines so as to bridge the gap between highly controlled clinical trials intended for regulatory approval and the largely uncontrolled delivery of new vaccines. Also includes studies conducted after regulatory approval that assess vaccine effectiveness in the wider population or which are necessary to support product use in LMICs.

22.1 Pharmacovigilance and post-registration studies of newly registered preventive vaccines to assess adverse reactions, toxicology and safety

22.2 Effectiveness studies and head-to-head comparator studies of newly registered preventive vaccines (with other therapies or interventions)

22.3 Cost-effectiveness studies of newly registered preventive vaccines

22.4 Treatment interactions and population level studies (of newly registered preventive vaccines e.g., pharmaco-epidemiological and resistance studies)

22.5 Behavioural research post-registration of new preventive vaccines relating to risk assessment, factors affecting adherence to protocol, provider compliance, and product acceptability

22.6 Case history reports and assessment of long-term prophylaxis using newly registered preventive vaccines in communities in LMICs

Back to top

IV. BIOLOGICS

Research activities and processes necessary to develop and improve investigational biological agents specifically intended to prevent or treat infection; including design, preclinical and clinical development, and other activities essential for successful development and uptake. This includes broadly neutralising monoclonal antibodies (bNAbs); polyclonal antibodies; and other bio-therapeutics such as peptide-, DNA- and RNA-based synthetic molecules. Please see section X for disease-specific restrictions to research activities in this category.

23. DISCOVERY AND PRECLINICAL

Research activities targeted at discovering and optimising investigational biologics and including the processes necessary to allow a candidate biologic to proceed to human trials; including:

23.1 Studies supporting novel biologic design including target validation, characterisation and selection

23.2 Candidate screening and lead optimisation

23.3 Development of analytical tests for assaying biologics, including the development of animal models

23.4 Evaluation of biologic technologies (e.g. adjuvants, delivery systems) to improve the immunogenicity or delivery of an identified candidate

23.5 Biologic pharmacokinetic, toxicity and metabolism studies in vitro and in animal models, including bioavailability, adsorption, metabolism, and excretion (ADME) studies
23.6 Preclinical safety and immunogenicity studies with candidate biologics, including use or development of functional assays

23.7 Preclinical animal studies, challenge models, and studies addressing the correlation between in vitro models, animal models and field results necessary to satisfy Investigational New Drug (IND) requirements

23.8 Process development and scale-up manufacture, including production of Good Laboratory Practice (GLP) and Good Manufacturing Practice (GMP) batches for regulatory toxicology studies and other Chemistry and Manufacture Control (CMC) activities required to allow a candidate biologic to proceed to human trials

23.9 Research on safety and regulatory considerations (e.g. validation of preclinical assays to permit registration)

23.10 Preparation of an Investigational New Drug (IND) application for regulatory submission

23.11 Optimisation of biologic candidates for global use (cheaper, more stable, ease of administration, addition of LMIC-specific targets)

24. CLINICAL DEVELOPMENT - PHASE I

First-in-human clinical trials to determine the safety and tolerability of investigational new biologics in a small group of patients or healthy volunteers, including:

24.1 Phase Ia studies assessing safety, dosing and immunogenicity in human volunteers; including, pharmacokinetic dynamics and tolerance in healthy volunteers.

24.2 Phase Ib studies assessing safety, dosing and immunogenicity in clinically exposed or high-risk populations

25. CLINICAL DEVELOPMENT - PHASE II

Clinical trials to determine the efficacy, safety and therapeutic dose of investigational new biologics in a small set of human subjects (up to several hundred), including:

25.1 Phase Ila challenge studies

25.2 Phase Iib safety and preliminary efficacy studies in exposed populations or those at high-risk of infection

26. CLINICAL DEVELOPMENT - PHASE III

Clinical trials to support the registration of investigational new drugs or label-expansion of already registered drugs in a trial population large enough to provide statistical (typically several hundred), including:

26.1 Phase III expanded efficacy, effectiveness and safety studies required for registration purposes, including implementation, retention and follow-up of volunteers

27. CLINICAL DEVELOPMENT - BASELINE EPIDEMIOLOGY

Studies evaluating potential trial site populations to confirm disease incidence, prevalence or exposure risk, and which serve as the foundation for determining the optimal collection, analysis, interpretation and presentation of clinical trial data; including:
27.1 Epidemiological studies directly linked to the conduct or support of clinical trials of biologics in development, in order to assess or validate the epidemiology of disease, disease incidence, or health of target populations at trial sites

27.2 Preliminary studies of morbidity and mortality at potential clinical trial sites, where these studies are directly linked to planned product trials

27.3 Pre-trial activities designed to understand trial site conditions before the commencement of trials and to facilitate engagement

28. CLINICAL DEVELOPMENT - UNSPECIFIED

Other costs required to support clinical testing of investigational new biologics as needed for regulatory approval; including:

28.1 Infrastructure and site development costs directly associated with the conduct of clinical trials for biologic development in LMICs (e.g. refurbishment of hospital wing, vehicle purchase, generators, training and community relationship building)

28.2 Further product development to generate the final clinical formulation, dosage form and other Chemistry and Manufacture Control (CMC) activities required for regulatory submission

28.3 Compiling of all non-clinical and clinical data to obtain a Biologics License from regulatory authorities

28.4 Behavioural research prior to registration relating to risk assessment, factors affecting adherence to protocol, and product acceptability

28.5 Protocol development, investigator meetings, Good Clinical Practice (GCP)-monitoring, quality control, data management, analysis and reporting, establishing a Data Safety Monitoring Board (DSMB), and trial audits

29. POST-REGISTRATION STUDIES

Studies relating to the detection, monitoring, evaluation, and prevention of adverse events associated with newly approved biologics so as to bridge the gap between highly controlled clinical trials intended for regulatory approval and the largely uncontrolled use of new biologics by patients. Also includes studies conducted after regulatory approval that assess biologic effectiveness in the wider population or which are necessary to support product use in LMICs.

29.1 Studies conducted after regulatory approval that assess biologic effectiveness in the wider population or which are necessary to support product use in LMICs

29.2 Pharmacovigilance and post-registration studies of newly registered biologics to assess adverse reactions, toxicology and safety

29.3 Effectiveness studies and head-to-head comparator studies of newly registered biologics (with other therapies or interventions)

29.4 Cost-effectiveness studies of newly registered biologics

29.5 Treatment interactions and population level studies (of newly registered biologics e.g., pharmaco-epidemiological and resistance studies)

29.6 Behavioural research post-registration of new biologics relating to risk assessment, factors affecting adherence to protocol, provider compliance, and product acceptability

29.7 Case history reports and assessment of long-term prophylaxis using newly registered biologics in communities in LMICs
V. DIAGNOSTICS

Research activities and processes necessary to develop, optimise, and validate diagnostic tests for use in resource-limited settings (cheaper, faster, more reliable, ease of use in the field); including discovery and design, preclinical and clinical evaluation, and other activities essential for successful deployment for public health use. Please see section X for disease-specific restrictions to research activities in this category.

30. DISCOVERY AND PRECLINICAL

Research activities targeted at discovering and optimising low-cost, stable, easy-to-use diagnostics for neglected diseases including the processes necessary to allow a potential product to proceed to clinical evaluation; including:

30.1 Validation, characterisation, and selection of targets suitable for diagnostic use
30.2 Validation of new diagnostic markers or biomarkers
30.3 Development and testing of low-cost, stable, easy-to-use diagnostic tests (e.g. simpler microscopy, improved sample collection/preparation, cheaper ELISA assays), including manufacturing design
30.4 New or improved diagnostics for disease staging and therapy decisions
30.5 New or improved diagnostic tools to identify resistant pathogens
30.6 New or improved diagnostics to identify specific target populations
30.7 Tailoring diagnostic tools for LMIC use, including improved point-of-care tests (rapid test), local laboratory test, reference laboratory tests and central laboratory tests
30.8 Creation of reference material banks

31. CLINICAL EVALUATION

Activities and processes associated with clinical evaluation of investigational diagnostic tools so as to demonstrate sensitivity and specificity in human subjects, together with other costs required to support such clinical trials; including:

31.1 Clinical efficacy trials
31.2 Small-scale testing in humans to establish sensitivity and specificity and utility
31.3 Technical evaluation of tests and studies evaluating product performance
31.4 Establishment of product specifications, kit development and quality assurance
31.5 Submission of relevant data to regulatory authorities for approval
31.6 Assessment & validation of trial sites to carry out product trials
31.7 Infrastructure and site development costs directly associated with the conduct of clinical trials for diagnostic development in LMICs (e.g. refurbishment of hospital wing, vehicle purchase, generators, training and community relationship building)

32. OPERATIONAL RESEARCH FOR DIAGNOSTICS

Operational procedures and implementation activities associated with novel diagnostic tools, which are necessary to support World Health Organization recommendations for global public health use including:

32.1 Larger-scale demonstration studies (assessing specificity, sensitivity and utility of the diagnostic test in LMICs)
32.2 Cost-effectiveness studies assessing the diagnostic test
32.3 Identification of pitfalls of the technology and studies of safety measures needed to support the technology
32.4 Studies to determine at what level of the health care system the technology is applicable (e.g. reference labs, regional labs)
32.5 Identification of training needs
32.6 Collecting evidence for expanding the use of a diagnostic tool in different countries
32.7 Development of equipment and customer support documents
32.8 Head-to-head comparator studies (with current gold standard) and in the context of existing diagnostic algorithms
32.9 Behavioural research relating to risk assessment, factors affecting diagnostics use, and user acceptability (patient and provider)
32.10 Epidemiological studies to assess or validate the epidemiology of disease, disease incidence or health of target populations at potential trial sites, and which are directly linked to clinical trials of a new diagnostic

Back to top

VI. MICROBICIDES

Research activities and processes necessary to develop and improve topical microbicides specifically intended to prevent HIV transmission; including microbicide discovery or design, preclinical and clinical development, and other activities essential for successful microbicide development and uptake.

Applications that may have high-income country (HIC) markets or be useful for other STIs (e.g. mucosal delivery technology, adjuvants) are EXCLUDED from the ND G-FINDER scope.

33. DISCOVERY AND PRECLINICAL

Research activities targeted at identifying, optimising, and characterising investigational microbicides and including the processes necessary to allow lead compounds to proceed to human trials; including:

33.1 Specific research aimed at discovery of topical applications for microbicide use (e.g. vaginal defence enhancers, surfactants, entry/fusion inhibitors and replication inhibitors)
33.2 Target validation, characterisation and selection
33.3 Preclinical evaluation of microbicide candidates including determination of acceptable formulation and delivery modes
33.4 Studies supporting safety & immunogenicity testing in animal models and looking at in vitro correlates of in vivo protective response
33.5 Developing reagents and standardised methods to assess microbicide-induced immune response in animals and humans
33.6 Optimisation of microbicide candidates, bioprocess development, formulation and mode of delivery of novel prevention tools for broad international use (cheap, easy to produce, stable, easy to administer) including production of Good Laboratory Practice (GLP) and Good Manufacturing Practice (GMP)-grade product for regulatory toxicology studies
33.7 Preparation of an Investigational New Drug (IND) application for regulatory submission

Back to top

34. CLINICAL DEVELOPMENT - PHASE I

First-in-human clinical trials to determine the safety of investigational new vaccines for the first time in human subjects (up to one hundred), including:

34.1 Phase Ia single ascending dose studies to determine pharmacokinetics, pharmacodynamics and maximum tolerated dose
34.2 Phase Ib multiple ascending dose studies to determine the pharmacokinetics, pharmacodynamics, safety and tolerability of multiple doses

35. CLINICAL DEVELOPMENT - PHASE II

Clinical trials to determine the efficacy, safety and therapeutic dose of investigational new microbicides in a small set of human subjects (up to several hundred), including:

35.1 Phase IIa proof of concept studies to demonstrate clinical efficacy or biological activity

35.2 Phase IIb dose-finding studies to determine dose with optimum biological activity with minimal adverse effects

36. CLINICAL DEVELOPMENT - PHASE III

Clinical trials to support the registration of investigational new drugs or label-expansion of already registered drugs in a trial population large enough to provide statistical significance (from several hundred to several thousand), including:

36.1 Regulatory standard clinical trials to assess effectiveness of novel microbicide products

37. CLINICAL DEVELOPMENT - BASELINE EPIDEMIOLOGY

Studies evaluating potential trial site populations to confirm disease incidence, prevalence or exposure risk, and which serve as the foundation for determining the optimal collection, analysis, interpretation and presentation of clinical trial data, including:

37.1 Epidemiological studies directly linked to the conduct or support of clinical trials of microbicides in development, in order to assess or validate the epidemiology of disease, disease incidence, or health of target populations at trial sites

37.2 Preliminary studies of morbidity and mortality at potential clinical trial sites, where these studies are directly linked to planned microbicide trials

37.3 Pre-trial activities designed to understand trial site conditions before the commencement of trials and to facilitate engagement

38. CLINICAL DEVELOPMENT - UNSPECIFIED

Activities and processes associated with clinical testing of investigational new microbicides to demonstrate safety and efficacy in human subjects (as needed for regulatory approval), together with other costs required to support such clinical trials, including:

38.1 Infrastructure and site development costs associated with the conduct of clinical trials for microbicide development in LMICs (e.g., refurbishment of hospital wing, vehicle purchase, generators, training and community relationship building)

38.2 Further microbicide development to generate the final clinical formulation, dosage form and other Chemistry and Manufacture Control (CMC) activities required for regulatory submission

38.3 Compiling of all non-clinical and clinical data for submission of a New Drug Application (NDA) to regulatory authorities

38.4 Behavioural research prior to registration relating to risk assessment, factors affecting adherence to protocol and product acceptability
38.5 Protocol development, investigator meetings, Good Clinical Practice (GCP) monitoring, quality control, data management, analysis and reporting, establishing a Data Safety Monitoring Board (DSMB) and trial audits

39. POST-REGISTRATION STUDIES

Studies relating to the detection, monitoring, evaluation, and prevention of adverse events associated with newly approved microbicides so as to bridge the gap between highly controlled clinical trials intended for regulatory approval and the largely uncontrolled delivery of new microbicides; including:

39.1 Studies conducted after regulatory approval that assess microbicide effectiveness in the wider population or which are necessary to support product use in LMICs

39.2 Pharmacovigilance and post-registration studies of newly registered microbicides to assess adverse reactions, toxicology and safety

39.3 Effectiveness studies and head-to-head comparator studies of newly registered microbicides (with other therapies or interventions)

39.4 Cost-effectiveness studies of newly registered microbicides

39.5 Treatment interactions and population level studies (of newly registered preventive microbicides e.g., pharmaco-epidemiological and resistance studies)

39.6 Behavioural research post-registration of new microbicides relating to risk assessment, factors affecting adherence to protocol, provider compliance, and product acceptability

39.7 Case history reports and assessment of long-term prophylaxis using newly registered microbicides in communities in LMICs

VII. VECTOR CONTROL PRODUCTS

Research and development activities and processes necessary to develop and improve vector control approaches intended to prevent infection and block transmission of a neglected disease from vector and/or animal reservoirs to human; including novel chemical vector control products, biological vector control products and reservoir targeted vaccines.

40. CHEMICAL VECTOR CONTROL PRODUCTS

This product category ONLY includes chemical active ingredients and formulations intended for global public health use and which specifically aim to inhibit, kill and/or repel indoor and outdoor vectors associated with neglected disease transmission. This includes new insecticides and formulations in LLINs/IRS; insecticide-based bait and traps; spatial repellents; systemic insecticides and endectocides; and chemical larvicides.

Predation measures, habitat control and infrastructure measures are EXCLUDED from the G-FINDER scope.

40.1 Primary and secondary screening and optimisation

Laboratory-based design, synthesis and testing of potential insecticides, chemical larvicides, molluscicides, trypanocides etc. and generation of data sufficient to allow developers to proceed field testing, including:

40.1.1 Primary and secondary screens (e.g. in vitro and in vivo screens, chemical screens, whole insect screens)

40.1.2 Target validation and characterisation

40.1.3 Lead optimisation, synthesis optimisation
40.1.4 Early toxicology screens (e.g. acute oral toxicity, eye and skin irritation studies, AMES/mutagenicity studies)
40.1.5 Applied laboratory research and small-scale field trials, including in vitro and glass house efficacy testing
40.1.6 Acute toxicology and ecotoxicology studies (e.g. animal studies, exposure studies, fish and wildlife studies)
40.1.7 Metabolism and stability studies in plants and animals including mode of action, residue analysis and cross-resistance studies
40.1.8 Environmental effect and decomposition studies in soil, water and air

40.2 Development
Pre-registration activities and processes associated with clinical testing of investigational chemical vector control products so as to generate data sufficient to allow developers to proceed to product roll-out & dissemination and including other costs required to support such clinical trials.

40.2.1 Small-scale efficacy studies, residue plots and field studies necessary for product optimisation and registration
40.2.2 Acute and long-term toxicology and ecotoxicology studies
40.2.3 Metabolic and residual fate studies, crop residue and exposure data
40.2.4 Environmental assessment and environmental chemistry data
40.2.5 Generation of hazard data in humans, domestic animals and non-target plants and animals
40.2.6 Compiling of all laboratory and field data necessary for submission to regulatory authorities
40.2.7 Behavioural research conducted pre-registration relating to risk assessment, factors affecting adherence to protocol, and product acceptability
40.2.8 Manufacturing process development, formulation and scale-up

40.3 PQ listing and regulatory approval
PQ assessment processes and post-registration research activities that comprise entomological, quality, safety and epidemiological evaluation (where appropriate) and development of specifications required for application of insecticide products for use in international public health programmes, including:

40.3.1 PQ assessment of laboratory studies (e.g. determining intrinsic insecticidal activity, diagnostic concentration, irritant or excito-repellent properties, cross-resistance to other insecticides, efficacy and residual activity on relevant substrates)
40.3.2 PQ assessment of small-scale field trials (e.g. efficacy and persistence under different ecological settings, dosage of application, handling and application, perceived side-effects)
40.3.3 PQ assessment of large-scale field trials (e.g. community level efficacy and residual activity, operational and community acceptance)
40.3.4 Assessment & validation of trial sites directly linked to product trials
40.3.5 Infrastructure and site development costs associated with the conduct of field trials for pesticide development in LMICs (e.g. refurbishment of hospital wing, vehicle purchase, generators, training and community relationship building)
40.3.6 Behavioural research conducted post-registration relating to risk assessment, factors affecting adherence to protocol, provider compliance and product acceptability
40.3.7 Studies that confirm efficacy, improve product uptake or confirm safety (e.g. studies to measure impact, usage levels, contamination potential or storage and disposal needs)
40.3.8 Surveillance studies directly linked to the conduct of field trials for vector control products; including studies that determine prevalence, track distribution, abundance, or significant habits of target vectors or the vector-borne pathogen
41. BIOLOGICAL VECTOR CONTROL PRODUCTS†

This product category ONLY includes research and development of innovative biological control interventions that specifically aim to kill or control vectors associated with transmitting neglected diseases (e.g. microbial/bacteriological larvicides, sterilisation techniques, and genetic modification measures).

Biological control interventions comprise the use of natural enemies or "engineered" products to manage vector populations either through the introduction of natural parasites, pathogens or predators of the target, or via the introduction of modified vector species to compete with natural sources.

Predation measures, habitat control and infrastructure measures are EXCLUDED from the G-FINDER scope.

41.1 Phase I

Laboratory studies of novel biological vector control techniques

41.1.1 Development of intervention concept and target product profile (TPP) that also specifies the intended product claim (e.g. target vector, entomological effect etc.)
41.1.2 Molecular, genotypic, physiological and behavioural characteristics research in genetically modified vectors
41.1.3 Activities related to generating transgenic vector lines, checking stability of the transgene and its phenotype and studies related to the rate of spread of a transgene in laboratory cage populations
41.1.4 Ecological modelling to assess environmental risk
41.1.5 Quality control to ensure new biological materials are well characterised, stable and detectable
41.1.6 Phenotypic evaluation research of transgenic endemic strains, including testing for adverse effects on target or non-target species
41.1.7 Laboratory assays to establish mechanism of action
41.1.8 Small-scale laboratory studies for efficacy and safety
41.1.9 Laboratory-based studies on efficacy and safety in larger population cages
41.1.10 Establishment of standard operating procedures for genetically modified vector production and release
41.1.11 Activities related to site preparation and hazard containment (risk analysis and risk management)
41.1.12 Activities related to data analysis as required by regulators
41.1.13 Modelling of expected cost of protection per person

41.2 Phase II

Semi-field tests or small-scale field trials (in physical or ecological confinement) to assess the entomological efficacy of the approach‡

41.2.1 Physically confined (large cage, greenhouse or screen-house type facility that simulates the disease-endemic setting) field trials or semi-field tests to assess entomological efficacy (biological and functional)
41.2.2 Ecologically confined (geographic/spatial and/or climatic isolation) small-scale field trials to assess entomological efficacy (biological and functional)
41.2.3 Ecological modelling to assess environmental risk

† Unlike the universally accepted definitions for the drug, vaccine and diagnostic R&D pathways, definitions for the biological control product R&D pathway are not firmly established. It is possible that the terminology may change over time as the scientific field develops, and as new biological control products undergo regulatory approval. Please note that the activities listed under each stage are not exhaustive but are intended to illustrate the most critical R&D activities within each stage.
‡ Reduction in the likelihood of disease transmission due to vector population characteristics
41.2.4 Compiling all entomological and epidemiological efficacy data as required by regulators
41.2.5 Activities related to site preparation and hazard containment (risk analysis and risk management)
41.2.6 Initial cost analysis of prototype or approach
41.2.7 Continued monitoring of molecular quality control

Back to top

41.3 Phase III

Large-scale staged field trials to assess the epidemiological efficacy of the approach§

41.3.1 Staged, open, large-scale randomised control trials to determine epidemiological efficacy (e.g., reduced disease prevalence, population suppression of target vector)
41.3.2 Ecological modelling to assess environmental risk
41.3.3 Trial site selection and preparation
41.3.4 Baseline studies such as ovitrap surveillance
41.3.5 Rearing and sorting of genetically modified vectors
41.3.6 Continued monitoring of molecular quality control
41.3.7 Activities related to data management and statistical analysis
41.3.8 Projection of cost per person protected and cost-efficacy of prototype or approach

Back to top

41.4 Phase IV

Studies, in real-world conditions, that validate the effectiveness of a newly-developed biological vector control product, or post-implementation surveillance of safety and quality

41.4.1 Pilot implementation studies
41.4.2 Post-implementation studies to validate feasibility, acceptability and cost-effectiveness
41.4.3 Post-implementation surveillance studies to measure mechanism of distribution, molecular quality control, efficacy and safety (including ecological safety) that are NOT part of routine disease or demographic surveillance activities

Back to top

42. RESERVOIR TARGETED VACCINES

This product category ONLY includes research and development of veterinary vaccines specifically designed to prevent animal to human transmission of neglected diseases. Vaccines developed and used solely for veterinary purposes are excluded from this product category.

42.1 Discovery and preclinical

Research activities targeted at discovering and optimising investigational vaccines and including the processes necessary to allow a candidate vaccine to proceed to animal trials; including:

42.1.1 Studies supporting novel vaccine design, including target validation and candidate optimisation
42.1.2 Development of animal models to assist in vaccine design and testing
42.1.3 Evaluation of vaccine technologies (e.g. adjuvants, delivery systems) to improve the immunogenicity of an identified candidate
42.1.4 Preclinical safety and immunogenicity studies with candidate vaccines, including use or development of functional assays
42.1.5 Preclinical animal studies, challenge models and addressing the correlation between in vitro models, animal models and field results
42.1.6 Studies on the genetics of the immune response to selected antigens as vaccine candidates, optimisation of animal models and correlates to clinical results

§ Reduction in the incidence of infection or disease in human populations
42.1.7 Manufacturing scale-up and consistency of manufacture, including production of Good Laboratory Practice (GLP) and Good Manufacturing Practice (GMP) batches for regulatory toxicology studies and other Chemistry and Manufacture Control (CMC) activities required to allow a candidate vaccine to proceed to human trials

42.1.8 Research on safety and regulatory considerations (e.g. validation of preclinical assays to permit registration)

42.1.9 Preparation of a Veterinary Biological Product License application for regulatory submission

42.1.10 Optimisation of vaccine candidates for global use (cheaper, more stable, ease of administration, addition of LMIC-specific strains)

Back to top

42.2 Clinical development

Activities and processes associated with clinical testing of investigational vaccines so as to demonstrate safety, immunogenicity and efficacy in animals including animal to human transmission (as needed for regulatory approval), together with other costs required to support such clinical trials, including:

42.2.1 Phase Ia studies assessing safety, dosing, and immunogenicity in animals; Phase Ib studies assessing safety, dosing, and immunogenicity in clinically exposed or high-risk animal populations

42.2.2 Phase IIa challenge studies; Phase II safety and preliminary efficacy studies in exposed animal populations or those at high-risk of infection

42.2.3 Phase III expanded efficacy, effectiveness and safety studies required for registration purposes

42.2.4 Infrastructure and site development costs associated with the conduct of clinical trials for vaccine development in LMICs (e.g. vehicle purchase, generators, training and community relationship building)

42.2.5 Further biological/product development to generate the optimal clinical formulation and dosage form, and other Chemistry and Manufacture Control (CMC) activities required for regulatory submission

42.2.6 Compiling all non-clinical and clinical data to obtain a Biologics License from regulatory authorities

42.2.7 Behavioural research during clinical trials relating to risk assessment, factors affecting adherence to protocol, and product acceptability

42.2.8 Protocol development, investigator meetings, Good Clinical Practice (GCP) monitoring, quality control, data management, analysis and reporting, establishing a Data Safety Monitoring Board (DSMB) and trial audits

Back to top

42.3 Phase IV/pharmacovigilance

Studies relating to the detection, monitoring, evaluation, and prevention of adverse events associated with newly approved vaccines so as to bridge the gap between highly controlled clinical trials intended for regulatory approval and the largely uncontrolled delivery of new vaccines. Also includes studies conducted after regulatory approval that assess vaccine effectiveness in real world settings or which are necessary to support product use in LMICs.

42.3.1 Pharmacovigilance and post-registration studies of newly registered preventive vaccines to assess adverse reactions, toxicology and safety

42.3.2 Effectiveness studies and head-to-head comparator studies of newly registered preventive vaccines (with other therapies or interventions)

42.3.3 Cost-effectiveness studies of newly registered preventive vaccines

42.3.4 Treatment interactions and population level studies (of newly registered preventive vaccines, e.g. pharmaco-epidemiological and resistance studies)

42.3.5 Behavioural research post-registration of new preventive vaccines relating to risk assessment, factors affecting adherence to protocol, provider compliance, and product acceptability
42.3.6 Case history reports and assessment of long-term prophylaxis using newly registered preventive vaccines in LMICs

Back to top

42.4 Baseline epidemiology

Studies evaluating potential trial site animal populations to confirm disease incidence, prevalence or exposure risk, and which serve as the foundation for determining the optimal collection, analysis, interpretation and presentation of clinical trial data, including

42.4.1 Epidemiological studies directly linked to the conduct or support of clinical trials of vaccines in development, in order to assess or validate the epidemiological impact on disease, disease incidence, or health of target animal populations at trial sites

42.4.2 Preliminary studies of morbidity and mortality at potential clinical trial sites, where these studies are directly linked to planned vaccines trials

42.4.3 Pre-trial activities designed to understand trial site conditions before the commencement of trials and to facilitate engagement

Back to top

VIII. CAN NOT BE ALLOCATED TO ONE DISEASE

43. MULTI-DISEASE VECTOR CONTROL PRODUCTS

This category ONLY applies to vector control product R&D that is not yet targeted at a specific neglected disease, or is explicitly targeted at multiple vector-borne neglected diseases. Disease-specific investment associated with R&D of vector control products with multi-disease potential (e.g. assessment of the epidemiological efficacy of Wolbachia carrying mosquitoes in reducing dengue incidence) DOES NOT fall under this category.

Example:

i. Design and synthesis of new mode-of-action chemicals for controlling mosquitoes of various species (Anopheles, Aedes and/or Culex)

ii. Development of a sterile-insect technique for controlling mosquito-borne diseases

43.1 Multi-disease chemical vector control products

43.1.1 See section 40 for the full outline of R&D activities included under this product category

43.2 Multi-disease biological vector control products

43.2.1 See section 41 for the full outline of R&D activities included under this product category

43.3 Multi-disease reservoir targeted vaccines

43.3.1 See section 42 for the full outline of R&D activities included under this product category

Back to top

44. CORE FUNDING OF A MULTI-DISEASE R&D ORGANISATION

This category applies to organisations that disburse core funding or non-earmarked funding to an organisation that researches and develops products for multiple neglected diseases, and where it is unknown how the funding has been allocated within the recipient organisation.

Example:

i. Core funding has been allocated to an organisation that researches tuberculosis, Buruli ulcer and leprosy, but the donor does not know how much has been allocated to each disease

Back to top

45. PLATFORM TECHNOLOGIES

45.1 ADJUVANTS AND IMMUNOMODULATORS
Adjuvants and immunomodulators are compounds or structures that aim to improve, modulate or potentiate the immune response. These include compounds such as CpG oligonucleotides, lipopolysaccharide derivatives, Toll-like receptor agonists, chemokines and cytokines.

This category has **strict restrictions**:

45.1.1 **ONLY** includes funding for R&D which meets the following conditions:

- a) It is conducted by public, philanthropic or not-for-profit entities
- b) It is research that is not directed towards a specific disease or product
- c) It is aimed at developing safer, cheaper, more immunogenic adjuvants and immunomodulators suitable for use in LMICs
- d) The resulting research findings or leads **MUST** be accessible to organisations developing pharmaceutical or biological products for neglected diseases

- If the adjuvant or immunomodulator is being developed as part of a specific product, this investment is included under the relevant disease and product category (e.g. adjuvant R&D as part of a malaria vaccine construct is included under malaria vaccines)

Examples of R&D for adjuvants and immunomodulators **INCLUDED** in the survey scope:

i. Understanding the innate or adaptive immune response, e.g. studies of Toll-like receptors for the purpose of adjuvant discovery
ii. Strategies for targeting the cellular immune response to improve the quality of known adjuvants
iii. Developing a systematic approach to adjuvant discovery (e.g. predictive in vitro assays)
iv. High throughput screening to identify potential adjuvants

---

**45.2 DRUG DELIVERY TECHNOLOGIES AND DEVICES**

Drug delivery technologies and devices comprise mucosal delivery tools and alternative delivery technologies that facilitate the successful delivery of pharmaceutical or biological products in a resource-limited setting (e.g. emulsions, sprays, patches).

This category has **strict restrictions**:

45.2.1 **ONLY** includes funding for R&D which meets the following conditions:

- a) It is conducted by public, philanthropic or not-for-profit entities
- b) It is research that is not directed towards a specific disease or product
- c) It is research aimed at developing cheaper, faster, more user-friendly drug delivery technologies and devices, intended for use in resource-limited settings.

Examples of R&D for delivery technologies and devices **INCLUDED** in the survey scope:

i. Discovery and optimisation of mechanisms for controlled release
ii. Development of methods to enhance oral bioavailability of poorly water-soluble drugs

---

**45.3 VACCINE DELIVERY TECHNOLOGIES AND DEVICES**

Vaccine delivery technologies and devices comprise mucosal delivery tools, vaccine carrier systems, and alternative delivery technologies that facilitate the successful delivery of vaccines in a resource-limited setting (e.g. dendritic cell systems, novel viral vectors, sprays, patches and needle-free devices).

This category has **strict restrictions**:

45.3.1 **ONLY** includes funding for R&D which meets the following conditions:

- a) It is conducted by public, philanthropic or not-for-profit entities
- b) It is research that is not directed towards a specific disease or product
c) It is research aimed at developing cheaper, faster, more user-friendly vaccine delivery technologies and devices, intended for use in resource-limited settings.

Examples of R&D for delivery technologies and devices **INCLUDED** in the survey scope:

i. Development of an intra-nasal vaccine delivery platform
ii. Development of a plant-based sub-unit vaccine delivery system
iii. Development of a mucosal vaccine platform

**45.4 GENERAL DIAGNOSTIC PLATFORMS**

This category has **strict restrictions**:

45.4.1 ONLY includes funding for R&D which meets the following conditions:

a. It is conducted by public, philanthropic or not-for-profit entities
b. It is research that is not directed towards a specific disease or product

... (remaining text continues)

Examples of R&D for general diagnostic platforms **INCLUDED** in the survey scope:

i. Simplification of a diagnostic approach to reduce costs e.g. lateral flow tests for malaria
ii. Re-designing tests/equipment to use cheap, standard reagents
iii. Work to make standard tests cheaper and simpler e.g. simpler ELISA assays; simpler Nucleic Acid Amplification tests; simpler DSTs

... (remaining text continues)

**46. OTHER R&D**

The other R&D category is for funding disbursed or received for research and development efforts that simultaneously focus on two or more neglected diseases, **and which therefore cannot be apportioned to the specific disease categories**.

Examples of other R&D:

i. Research into the interaction between HIV and tuberculosis:
   If research is part of the normal development path of a product for a specific disease (e.g. testing new TB drugs in special populations such as AIDS patients), it is included under the specific disease and product category where the product will be used (e.g. TB drugs)

ii. Development of a diagnostic to differentiate between different causes of fever (e.g. between malaria and meningitis)

iii. Development of a multi-disease diagnostic (e.g. the test can identify tuberculosis, malaria or sleeping sickness depending on the reagents used)

iv. Development of a multi-disease vaccine (e.g. a combination pneumonia/meningitis vaccine)

... (remaining text continues)

**IX. OUT OF SCOPE (EXCLUDED FROM THE SURVEY)**

**47. GENERAL EXCLUSIONS**

The G-FINDER survey only captures investments that support pharmaceutical R&D where products aimed at preventing, treating or curing neglected diseases for patients in LMICs either do not already exist, or are inappropriate for LMIC contexts.

The following categories are therefore **EXCLUDED** from the survey:

47.1 Non-pharmaceutical tools
   47.1.1 Adult male circumcision, cervical barriers, HSV-2 prevention, untreated bed nets, traps, water sanitation tools

47.2 General supportive, nutritional and symptomatic therapies
   47.2.1 Oral rehydration therapy
47.2.2 Micronutrient supplementation, vitamins
47.2.3 Anti-pyretics, painkillers

47.3 Products developed and used for veterinary purposes

47.4 In-kind contributions

47.4.1 In-kind R&D contributions are excluded from the survey due to the difficulty in quantifying their value; however a sample of these contributions is highlighted in G-FINDER reporting. Typical in-kind contributions would include training of LMIC scientists, sharing of expertise or access to compounds.

47.5 Additional exclusions for private sector investment

47.5.1 Industry overhead costs, capital costs and opportunity costs are excluded, due to the difficulty of quantifying these and allocating them to the neglected disease investment. However, the published report will acknowledge the role of these in contributing to costs.

48. NON-PRODUCT R&D EXCLUSIONS

The intention of the G-FINDER survey is to capture investments into neglected disease product development as accurately as possible.

The following R&D activities are therefore EXCLUDED from the survey:

48.1 Clinical studies not linked to development of a NEW product

48.1.1 Protocol studies and clinical trials using established, available products (not linked to formal label-expansion trials of new products)

48.1.2 Epidemiological surveillance and monitoring studies that are not directly linked to product development. For example, routine DSS (Demographic Surveillance System) activities.

48.2 Health services and access research

48.2.1 Any clinical study not linked to development of a product - disease management, studies of community attitudes, knowledge and practice in relation to neglected disease treatment and control programs

48.2.2 Health care service studies in relation to delivery of neglected disease treatment and control measures

48.2.3 Design of treatment and control programs appropriate to local prevailing conditions

48.2.4 Implementation and evaluation of large-scale neglected disease treatment and control programs operated through health care services, government ministries, non-governmental organizations (NGOs), etc.

48.2.5 Roll-out of proven vector control products (e.g. traps and nets, DDT)

48.2.6 Advocacy, community education and policy activities related to use, access, or roll-out of new products

48.3 Operational programme assessment

48.3.1 Reviews on the status of neglected disease product development

48.3.2 Studies on the economic impact of neglected disease morbidity and mortality on communities

48.3.3 Studies on the economics of neglected disease prevention and control measures

48.3.4 Mathematical modelling of the disease (e.g. transmission, immune response)

48.3.5 Fostering collaboration between academia, industry, government agencies, and NGOs.
48.4 General capacity building (human and infrastructure)

Capacity building activities are excluded unless they are **directly** linked to development of a new neglected disease product.

The following capacity building activities are therefore **excluded**:

- **48.4.1** Building academic research capacity; improving existing academic capacity (except where directly linked to development of a specific product)
- **48.4.2** Providing training opportunities; strengthening R&D institutional capacity; developing and maintaining personnel (except where directly linked to development of a specific product).
- **48.4.3** Major infrastructure development (e.g. design, construction and validation of large-scale manufacturing facilities)

**Back to top**

X. CATEGORY RESTRICTIONS

The G-FINDER survey **only** captures investments that support R&D for products that are suitable for addressing neglected diseases amongst populations in LMICs that either do not already exist, or are inappropriate for resource-limited settings. As such, each neglected disease included in the survey may have further restrictions based on the specific R&D gaps identified. The following restrictions therefore apply to each product category and disease as defined below:

### 49. BASIC RESEARCH

**Restrictions**: Basic research is restricted for the following diseases:

- **49.1 HIV/AIDS**
  - only includes basic research that is related to preventive vaccines (e.g. immunological responses to potential antigens) and microbicides (e.g. mechanism of mucosal transmission), or basic research that is explicitly targeted at LMIC needs.
- **49.2 Bacterial pneumonia & meningitis**
  - only includes basic research related to the natural history, epidemiology, biochemistry, and genetics of *S. pneumoniae* and/or *N. meningitidis* in LMIC contexts (e.g. epidemiological research on serotype/serogroup distribution in LMICs; impact of age, HIV status, and malnutrition on disease prevention strategies; impact of the nasopharyngeal microbiome on disease transmission dynamics).
- **49.3 Hepatitis B**
  - only includes basic research that is explicitly targeted at LMIC needs, such as that related to HBV epidemiology and genetics in LMIC contexts (e.g. epidemiology of HBV drug resistance or vaccine escape mutants in LMICs)
- **49.4 Snakebite envenoming**
  - only includes basic research that is explicitly targeted at LMIC needs (e.g. proteomic analysis of snake venom from high burden regions)

**Back to top**

### 50. DRUGS

**Restrictions**: R&D for drugs is restricted for the following diseases:

- **50.1 HIV/AIDS**
  - only includes LMIC-specific costs for label-expansion** clinical trials of new drugs and reformulations for LMIC use (e.g. paediatric or slow-release formulations; fixed dose combinations; low dose drug formulations for prophylaxis; long-acting injectables for treatment or prophylaxis) or preclinical research targeted at developing such products.

**Label-expansions refer to changes to drugs or their labels after they have been approved. This includes changes in manufacturing, recommended patient population and/or formulation. To change a label, market a new dosage or strength of a drug, or change the way a drug is manufactured, the Company must submit a supplemental new drug application (sNDA) to regulatory authorities to obtain marketing approval.**
50.2 Diarrhoeal diseases (cholera, Shigella, cryptosporidiosis, and multiple diarrhoeal diseases)

ONLY includes pharmacological interventions that target the pathogen. Supportive therapies (e.g. zinc treatment, oral rehydration therapy, or other fluid and nutritional supplements) are EXCLUDED

50.3 Hepatitis B

ONLY includes LMIC-specific costs for label-expansion clinical trials of new drugs, reformulations for LMIC use (e.g. curative therapies; drugs for preventing mother-to-child transmission of HBV; long-acting treatment formulations), registration of suitable drugs in LMICs, or preclinical research targeted at developing such products

50.4 Hepatitis C

ONLY includes LMIC-specific costs of label-expansion clinical trials of new drugs, reformulations for LMIC use (e.g. fixed-dose combinations), registration of suitable drugs in LMICs, or preclinical research targeted at developing such products

50.5 Snakebite envenoming

ONLY includes drugs being developed specifically for LMIC needs (e.g. antivenoms incorporating small molecule inhibitors; heat-stable venom-agnostic oral drugs to slow down neurotoxicity), or in support of registration of drugs in LMICs

51. VACCINES

RESTRICTED R&D for preventive vaccines for the following diseases:

51.1 Bacterial pneumonia caused by S. pneumoniae

ONLY includes R&D on vaccines being developed specifically for LMIC needs, or in support of registration of suitable vaccines in LMICs.

To be considered ‘suitable’ a vaccine must at a minimum:

a) Be designed for use in infants less than two years of age;

b) Provide broad coverage across all S. pneumoniae serotypes, or focused protection against strains prevalent in LMICs (at minimum serotypes 1, 5, and 14); and

c) Be of equivalent or better efficacy than existing approved conjugate vaccines.

Vaccines being developed specifically for LMIC needs would be expected to be low-cost, regardless of whether using a whole cell, non-conjugate, combination conjugate-non-conjugate or low-cost conjugate approach

For multi-valent vaccines covering both HIC and LMIC strains, only LMIC-specific costs are included; for example, for trials, registration and Phase IV/pharmacovigilance studies in LMICs

51.2 Bacterial meningitis caused by N. meningitidis

ONLY includes R&D on vaccines specifically for developing-country registration, or in support of registration of suitable vaccines in LMICs. Such a vaccine must, at a minimum:

a) Provide coverage against N. meningitidis serotype A;

b) Be a conjugate vaccine;

c) Be designed for use in infants less than two years of age; and

d) Be designed to cost less than one US dollar per dose

For multi-valent vaccines covering HIC and LMIC strains, only LMIC-specific costs are included; for example, for trials, registration and Phase IV studies in LMICs

51.3 Diarrhoea caused by rotavirus

ONLY includes LMIC-specific R&D, including clinical trials, registration and Phase IV studies in the target LMICs

51.4 Hepatitis C
**52. DIAGNOSTICS**

For all neglected diseases included in the G-FINDER scope, R&D for diagnostics is **RESTRICTED** to the development of cheap, stable, easy-to-use diagnostics suited to resource-limited settings.

**RESTRICTIONS:** R&D for diagnostics is **RESTRICTED further** for the following diseases:

52.1 Leptospirosis

**ONLY** includes R&D on diagnostics suited to resource-limited settings. Such a diagnostic must at a minimum:

a) Detect the disease during the septicemic or early acute phase of disease;
b) Be accurate, easy to interpret, with little or no processing and give the results within 1-2 hours; and
c) Be cheap, stable, easy-to use (i.e. should not require specific equipment and/or laboratory and highly trained staff)

52.2 Snakebite envenoming

**ONLY** includes R&D for diagnostics capable of identifying envenomation by medically-important snake species common to LMICs

**Back to top**

**53. BIOLOGICS**

**RESTRICTIONS:** R&D for biologics is **RESTRICTED** for the following diseases:

53.1 HIV/AIDS

**ONLY** includes R&D for biologics being developed specifically for LMIC needs, or in support of registration of biologics in LMICs

53.2 Diarrhoeal diseases (cholera, *Shigella*, *cryptosporidiosis*, and multiple diarrhoeal diseases)

**ONLY** includes R&D for biologics being developed specifically for LMIC needs, or in support of registration of biologics in LMICs

53.3 Hepatitis B

**ONLY** includes R&D for biologics being developed specifically for LMIC needs, or in support of registration of biologics in LMICs. Such biologics must at a minimum provide coverage across HBV genotypes prevalent in LMICs (A, B, C, D, E, F, H and/or I)

53.4 Snakebite envenoming

**ONLY** includes R&D for biologics being developed specifically for LMIC needs (e.g. antivenom immunoglobulins based on the venom of snakes from LMICs), or in support of registration of biologics in LMICs

**Back to top**

**54. VECTOR CONTROL PRODUCTS**

54.1 Chemical vector control products

This product category **ONLY** includes chemical active ingredients and formulations intended for global public health use and which specifically aim to inhibit, kill and/or repel indoor and outdoor vectors associated with neglected disease transmission. This includes new insecticides and formulations in LLINs/IRS; systemic insecticides and
endectocides; insecticide-based bait and traps; spatial repellents; and chemical larvicides. Predation measures, biological larvicides, habitat control and infrastructure measures are EXCLUDED from the G-FINDER scope.

54.2 Biological vector control products

This product category ONLY includes research and development of innovative biological control interventions that specifically aim to kill or control vectors associated with transmitting poverty-related diseases (e.g. microbial/bacteriological larvicides, sterilisation techniques, and genetic modification measures).

Predation measures, habitat control and infrastructure measures are EXCLUDED from the G-FINDER scope.

54.3 Reservoir targeted vaccines

This product category ONLY includes research and development of veterinary vaccines specifically designed to prevent animal to human transmission of neglected diseases.

Vaccines developed and used solely for veterinary purposes are EXCLUDED from this product category.

55. CAN NOT BE ALLOCATED TO ONE DISEASE

RESTRICITONS: R&D that cannot be allocated to one disease is RESTRICTED for the following categories:

55.1 Adjuvants and immunomodulators

ONLY includes funding for R&D which meets the following conditions:

a) It is conducted by public, philanthropic or not-for-profit entities (i.e. private sector investment into adjuvants and immunomodulators is EXCLUDED)

b) It is research that is not directed towards a specific disease or product

c) It is research aimed at developing safer, cheaper, more immunogenic adjuvants and immunomodulators.

d) The resulting research findings or leads must be accessible to organisations developing pharmaceutical or biological products intended to treat or prevent neglected diseases.

55.2 Drug delivery technologies and devices

ONLY includes funding for R&D which meets the following conditions:

a) It is conducted by public, philanthropic or not-for-profit entities (i.e. private sector investment into delivery technologies and devices is EXCLUDED)

b) It is research that is not directed towards a specific disease or product

c) It is research aimed at developing cheaper, faster, more user friendly drug delivery technologies and devices, intended for use in resource-limited settings

55.3 Vaccine delivery technologies and devices

ONLY includes funding for R&D which meets the following conditions:

a) It is conducted by public, philanthropic or not-for-profit entities (i.e. private sector investment into delivery technologies and devices is EXCLUDED)

b) It is research that is not directed towards a specific disease or product

c) It is research aimed at developing cheaper, faster, more user-friendly vaccine delivery technologies and devices, intended for use in resource-limited settings.

55.4 General diagnostic platforms

ONLY includes funding for R&D which meets the following conditions:

a) It is conducted by public, philanthropic or not-for-profit entities (i.e. private sector investment into adjuvants and immunomodulators is EXCLUDED).

b) It is research that is not directed towards a specific disease or product.
c) It is research aimed at developing cheaper, faster, more user friendly diagnostic platforms or technologies, intended for use in resource-limited settings.
